

# VRChat / VTuber Commissions

## Terms of Service & Information

---

Hello, I'm **Toquidapus**, also known as **Aiden**!

I provide full furry VRChat avatar material setup, including texture creation, shader setup, Unity / vTuber implementation, and performance optimization.

By commissioning me, you agree to the following terms. These rules help ensure a smooth and fair process for the both of us!

# Pricing and Services

## Main Services

(Textures and Materials)

- ☐ Basic Retexture: \$50+  
Clean recoloring and light base texture edits.
- ☐ Advanced Retexture: \$100+  
Fully custom texturing as shown in my [portfolio](#), featuring advanced details such as emission maps, normal maps, and more.

## Advanced VRChat Addons

(Requires Advanced Retextures)

- ☐ Shaders Setup: +10%  
Adding special visual effects like glow, reflections, lighting, and more with the use of [Poiyomi shaders](#) for PC users, and advanced usage of VRChat's mobile materials for Android / iOS users.
- ☐ AudioLink: +5%  
Add effects that react to audio worlds that contain the [AudioLink prefab](#), such as glowing colors or moving patterns.
  - Keep in mind that this is visible to those on PC only!

## Additional Services

(Setup and Optimization)

- ☐ (Recommended) Unity / VRChat Setup: \$20  
Setting up the files as a **Unity Package file**, so the avatar works properly in VRChat. You can either upload these files to VRChat yourself, or have me do it for you. Otherwise, you will simply be given a .ZIP file containing the textures.
- ☐ vTuber Setup: \$20  
Setting up the files as a **.VRM file**, so the avatar works properly as a vTuber.
- ☐ VRChat Optimization: \$15  
Improving VRChat avatar performance to help reduce lag, potentially improving its [performance ranking](#) and effectively showing it to more users by default.
  - My ability to do this can only be determined after I have access to the avatar.
  - Unity Setup is [highly recommended](#) alongside this, as this will very likely change how existing animations and features of your avatar work on the technical side of things.

Prices may:

- Increase depending on avatar complexity.
- Change over time as my experience, workload, and demand change.
- All Unity related work will be exported as a Unity Package file.
- All prices are listed in **\$USD**.
- ★ [Click here](#) for a helpful currency converter.

## Model Requirements

You must either:

- a. Upload the avatar yourself through Unity. [Learn more](#)
- OR -
- b. Request Unity Setup services ([Unity Setup: \\$20 required](#)).
  - If you choose option b, I can either:
    - a. send you the .unitypackage file for you to upload yourself, or
    - OR -
    - b. upload and set up the avatar on your behalf by logging into your VRChat account.
  - I'll handle the upload for you by logging into your VRChat account on my end. For your safety, I recommend using a temporary password during this process.
  - I can also screenshare the setup process upon request to ensure transparency, and demonstrate that no malicious activity is taking place.

Several, if not most model creators require **both** the client and artist to own the model. In these cases, you need to:

- Provide proof of ownership
- Purchase your own copy of the model, plus a copy for me if required.

It is required that you own and have permission to edit any models / assets submitted for commission. I reserve the right to decline commissions involving unauthorized, leaked, or improperly redistributed materials.

# Payment and Refunds

## Accepted Payment Methods

**Zelle** (🇺🇸 U.S. only, preferred)

**PayPal**

**Note:** PayPal payments will include additional processing fees. You are responsible for covering any applicable transaction fees so I receive the agreed commission amount. [Learn more](#)

## Payment Policy

- Initial 50% before work begins, plus [model fee](#) if required.
- Remaining 50% near completion.

**Final files will not be delivered until the full payment is received.**

## Refund Policy

- Refunds are not available once work has started.
- If I am unable to complete your commission however, a full refund will be issued depending on progress made.
- I may also decline the commission if I deem it to be outside my skill set, or if they involve poor communication.

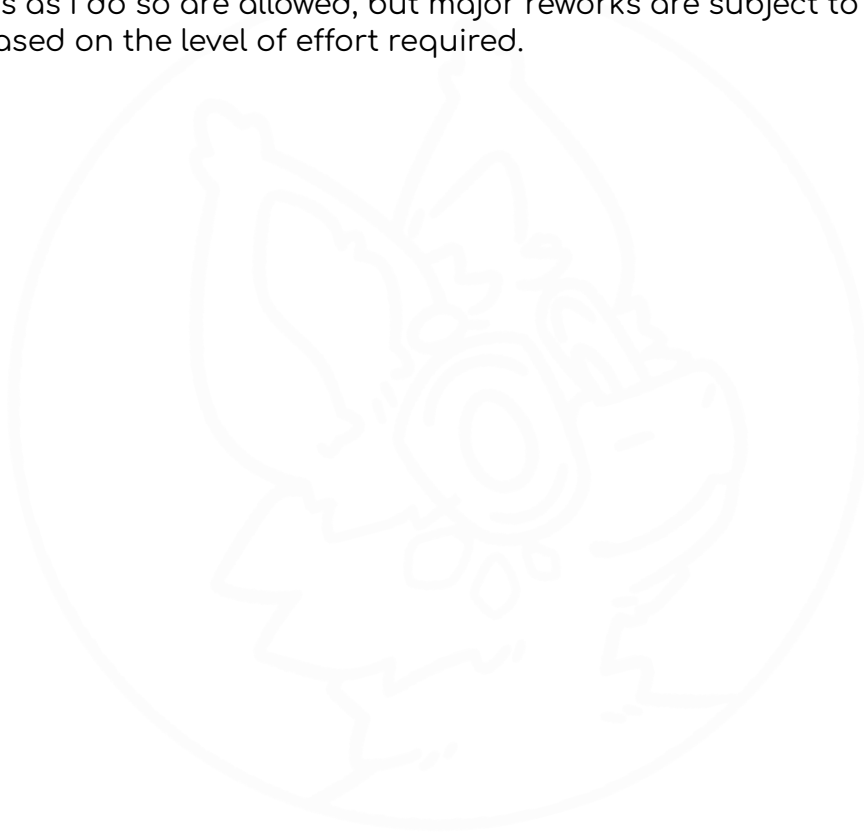

## Turnaround and Communication

**Commissions are estimated to take 1-3 months.** Delays may occur due to my current college / job workload, delays in communication, or complexity of the work, but I will do my best to keep you as updated as possible!

Continuous back and forth communication is expected throughout the process.

You are expected to provide clear references and instructions, and respond within a reasonable timeframe through agreed [contact methods on page 2](#).

Continuous back and forth communication is expected as I work on the model. Minor tweaks as I do so are allowed, but major reworks are subject to an upcharge based on the level of effort required.

Thank you for considering my commissions, and for supporting my work!  
Even if you're unable to commission me directly, sharing my work with others or recommending me through word of mouth helps more than you'd expect, and is always greatly appreciated!

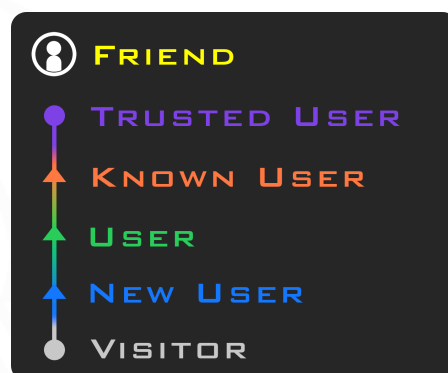

**Questions?** Please don't hesitate to reach out to me with one of my [available contact methods](#)!

## Q&A

### How do I upload my avatar?

Disclaimer: These instructions are intended as a general guide and assume that you have a .unitypackage file available, either because I provided one as part of your commission or because the model creator included one with your purchase. Some avatars may have additional setup. If you're unsure, please feel free to ask me for assistance.

1. Ensure you have a VRChat account, and your trust rank is at least **"NEW USER."** [Learn more](#)
2. Download the [VRChat Creator Companion](#), and create a new 2022 Avatar Project.
3. Install [Unity 2022.3.22f1](#).
  - 3.1. Recommended: Install this with Android Build Support to make your avatar uploadable for Quest / Android devices, and iOS Build Support for Apple devices.
4. Once your new project loads, use the white menu bar at the top, and navigate to Assets > Import Package > Custom Package...
5. Select your .unitypackage file and import it here.
6. Once again with the white menu bar at the top, navigate to VRChat SDK > Show Control Panel.
7. Under the "Authentication" tab in the VRChat SDK window, sign into VRChat.
8. Under the "Builder" tab in the VRChat SDK window, under "Build" at the bottom, select "Build & Publish your Avatar Online."

### Where is a good place to find models?

Personally, I highly recommend using [VRCArena](#)!

*"A free, community-driven, wiki-style collection of VR avatars, accessories, retextures and tutorials categorized and tagged to help you find what you're after."*
